W3C Invites Implementations of High Resolution Time and Resource Timing

22 May 2012 | Archive

The Web Performance Working Group invites implementation of two Candidate Recommendations:

- High Resolution Time. This specification defines a JavaScript interface that provides the current time in sub-millisecond resolution and such that it is not subject to system clock skew or adjustments.
- Resource Timing. This specification defines an interface for web applications to access the complete timing information for resources in a document.

Two Last Call Working Drafts published by the RDB2RDF Working Group

29 May 2012 | Archive

The RDB2RDF Working Group has published two Last Call Working Drafts today:

- A Direct Mapping of Relational Data to RDF. The need to share data with collaborators motivates custodians and users of relational data to RDF. This definition provides extension points for refinements within and outside of this document. Comments are welcome through 19 June.
- R2RML: RDB to RDF Mapping Language. This document describes R2RML, a language for expressing customized mappings from relational data in the RDF data model, expressed in a structure and target vocabulary of the mapping author's choice. R2RML mappings are themselves RDF graphs and written down in Turtle syntax. R2RML enables different types of mapping implementations. Processors could, for example, offer a virtual SPARQL endpoint over the mapped relational data, or generate RDF dumps, or offer a Linked Data interface.

HTML Media Capture Draft Published

29 May 2012 | Archive

The Device APIs Working Group has published a Working Draft of HTML Media Capture. The HTML Media Capture specification defines HTML form extensions that facilitate users' access to media capture capabilities of the hosting device. Learn more about the Ubiquitous Web Applications Activity

Three documents published by the Web Applications Working Group

29 May 2012 | Archive

The $\underline{\text{Web Applications Working Group}}$ has published three documents today:

- First Public Working Draft of **Gamepad**. The Gamepad specification defines a low-level interface that represents gamepad devices.
- First Public Working Draft of Pointer Lock. This specification defines an API that provides scripted access to raw mouse movement data while locking the target of mouse events to a single element and removing the cursor from view. This is an essential input mode for certain classes of applications, especially first person perspective 3D applications and 3D modelling software.
- Group Note of The From-Origin Header. The From-Origin Header specification defines the From-Origin response header -- a way for resources to declare they are unavailable within an embedding context.

Registration Open for Mobile Web Best Practices Course in Spanish; Early Bird Rate through 10 June

29 May 2012 | Archive

W3C announces registration is open for a new online training course in Spanish on Mobile Web Best Practices: "Buenas Prácticas en Web Móvil." Developed by the W3C/MobiWebApp team, the Spanish version of "Mobile Web 1" will be taught by Gicela Morales. The 6-week course begins 18 June 2012 and costs 225 EUR. However, an early bird rate of 195 EUR is available until 10 June 2012. Read the course description and enroll now for the early bird rate. Learn more about the W3C online training for Web developers program.
